

Good [Afternoon](#), this is an important message from P-S-E-G Long Island about work being performed in your area. [Yesterday afternoon](#), P-S-E-G Long Island removed a [damaged](#) transmission cable from service [that created](#) a leak of non-toxic dielectric fluid. De-energizing the cable did not result in any customer outages. The source of the failure was found near the intersection of Church Street and Scudder Avenue in Northport.

We are working in cooperation with the Department of Environmental Conservation. The leak has been contained and remediation work has already begun. You will see crews working in the area and making repairs [for the next several weeks](#). [One lane of](#) Church Street remains closed to traffic, however residents continue to have access to their driveways. We will provide an update as this work progresses. Thank you.
